About Me

I am an undergraduate Computer Science student at the Trincomalee Campus of Eastern University Sri Lanka with a strong passion for full stack web development. I primarily focus on building modern, scalable, and secure web applications using the MERN stack, including MongoDB, Express.js, React.js, and Node.js. I am continuously improving my development skills by working on real-world projects and exploring advanced concepts in both frontend and backend development. In addition to MERN stack development, I am currently expanding my knowledge by learning Next.js and NestJS to enhance my ability to build high-performance and production-ready applications. Alongside web development, I also have an interest in UI/UX design, where I focus on creating intuitive and user-friendly interfaces, and Cisco networking, including routing, switching, and network configuration. Through my university studies, I have gained a solid foundation in programming languages such as C++, Java, JavaScript, and MySQL, and I actively apply this knowledge in practical projects. I am passionate about developing efficient, secure, and user-centered applications and enjoy exploring new technologies related to web development, UI/UX design, and networking.

Education

Trincomalee Campus, Eastern University of Sri Lanka

July 2023 – Present

- Bachelor of Computer Science

R/Dharmaloka Maha Vidyalaya, Pelmadulla

Completed 2021

- G.C.E A/L 2021 (Combined mathematics - C , Chemistry - C , Physics - C)

Projects

(01). Beauty Care Web Application

[Backend](#) | [Frontend](#)

- Technologies: React.js, Node.js, Express.js, Tailwind CSS, APIs
- This is a MERN-stack beauty care web application with secure login, role-based access, and features for shopping, inventory management, and analytics, using Supabase for image storage. It also uses RESTful APIs (GET, POST, PUT, DELETE) to seamlessly view, add, update, and delete system data such as products, orders, and users.

(02). Library Management System

[Backend](#) | [Frontend](#)

- Technologies: React.js, Node.js, Express.js, MongoDB
- Modern MERN Library System with JWT auth, role-based access, real-time tracking, smart fines, and Supabase images. Admins/librarians manage users browse, borrow, track. Built with React and Tailwind CSS.

(03). Portfolio Website

[Frontend](#)

- Technologies: React.js, Tailwind CSS
- A modern, responsive React and Tailwind portfolio with dynamic roles, clean project sections, and an interactive contact form for a smooth, fast, engaging, visually appealing, highly intuitive, and well structured user experience.

(04). Electric Vehicle Charging Port Reservation System

[Backend](#) | [Frontend](#)

- Technologies: React.js, Node.js, Express.js, MongoDB, Geolocation
- University final year MERN-based EV Charging Reservation System with location detection, real-time port availability, slot booking, secure authentication, and admin dashboard. The system also allows users to find the nearest charging stations, check availability based on date and time, and manage their reservations efficiently through a user-friendly interface.

(05). Clinic Appointment Management System

[Backend](#) | [Frontend](#)

- Technologies: React.js, Node.js, Express.js, MySQL, Supabase
- Full-stack clinic appointment system with role-based access, JWT authentication, bcrypt security, doctor management, and real-time appointment booking and status updates. Includes both Appointment ID (system reference) and Appointment Number (user reference) for better tracking and user communication.

(06). Chat Application

[Frontend](#)

- Technologies: Next.js, Node.js, Express.js, MongoDB, Socket.io
- Full-stack real-time chat application with room-based messaging and WebSocket communication. Supports multiple chat rooms, real-time updates, room creation, and online user tracking. Includes persistent message storage and efficient real-time handling for seamless communication.

(07). Smart Office Network Setup

[Github](#)

- Technologies: Routing, Switching, VLAN Configuration
- A secure, scalable office network with VLANs, wireless SSIDs, VoIP, dynamic routing, and essential server services. Demonstrates real world professional network planning, security, and efficient management.

(08). Smart Home Network Setup with IoT Devices

[Github](#)

- Technologies: Wi-Fi Configuration, DHCP
- This is a Smart Home Network build using cisco Packet Tracer, where IoT devices are connected to a WI-Fi network and can be turned ON/OFF using phones or tablets remotely anytime easily.

Technical Skills

- **Languages:** Java, JavaScript, C++
- **Frontend:** React.js, Next.js
- **Backend:** Node.js, Express.js, NestJS
- **Databases:** MongoDB, MySQL
- **Cloud Services:** Supabase
- **Hosting / Deployment:** Render, Vercel
- **IDEs:** VS Code
- **API Development:** RESTful APIs
- **Cisco Networking:** Routing, Switching, VLAN Configuration
- **UI/UX Design:** Wireframing, Prototyping
- **Other Technologies:** Postman, Git, Cisco Packet Tracer, Figma

Soft Skills

- Time Management
- Team Management
- Team Building
- Teamwork
- Leadership
